ABSTRACT OF THE DISCLOSURE

5 A system has at least two data-receiving applications running on one or more data-receiving devices. Each data-receiving application is capable of requesting and receiving data. A data-processing apparatus and a datastorage apparatus are also provided, the data-storage apparatus being connected to the data-receiving applications via the data-processing 10 apparatus. The data-processing apparatus is arranged to receive a plurality of data-requests which form a request group from the data-receiving The data-processing apparatus is arranged to evaluate the applications. data-requests and to send a single request for the data-requests within the request group to the data-storage apparatus, and further arranged to receive 15 data from the storage apparatus, in response to the single request. The dataprocessing apparatus is arranged to process and distribute the received data, or portions thereof, to at least one of the data-receiving applications.
